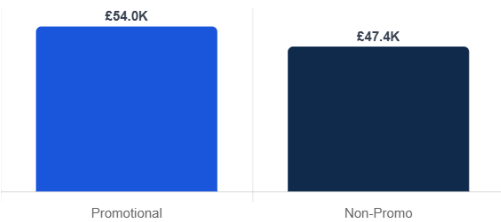
REVENUE LIFT %
+13.9%

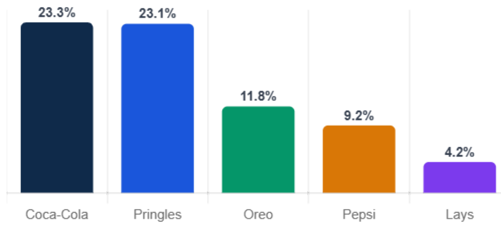
VOLUME LIFT %
+14.1%

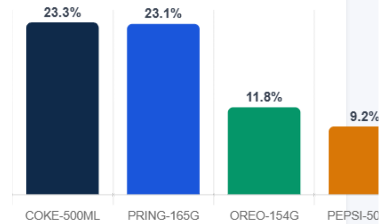
Promo vs Non-Promo Revenue

Revenue Lift % by Brand

Revenue Lift % by SKU







Executive Interpretation: Promotions generate +14.1% volume uplift but only +13.9% revenue lift per occurrence — the strategy is volume-led and transfers margin to consumers. COKE-500ML and PRING-165G deliver the strongest promotional mechanics. Recommend shifting from blanket price cuts to targeted bundle mechanics for high-elasticity SKUs and reviewing trade spend ROI quarterly.

Product Performance

SKU-level revenue and volume ranking

Top SKUs by Revenue

#	SKU	Revenue	Units	Avg £
1	**OREO-154G**	**£24.6K**	8.8K	£2.80
2	COKE-500ML	**£24.3K**	16.2K	£1.50
3	LAYS-200G	**£21.3K**	10.7K	£1.99
4	PEPSI-500ML	**£17.1K**	11.8K	£1.45
5	PRING-165G	**£14.2K**	5.7K	£2.50

SKU Revenue Ranking

Price Elasticity Analysis

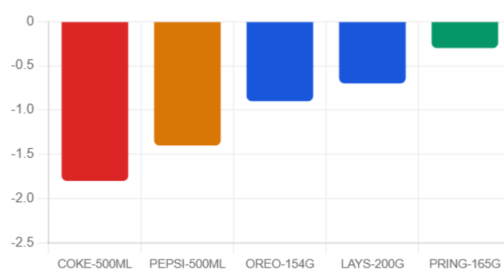
Price sensitivity classification and promotional candidacy

Elasticity Summary

SKU	Elasticity	Classification
COKE-500ML	**-1.8**	Highly Responsive
PEPSI-500ML	**-1.4**	Responsive
OREO-154G	**-0.9**	Moderately Responsive
LAYS-200G	**-0.7**	Moderately Responsive
PRING-165G	**-0.3**	Low Responsive

Best promo candidates: COKE-500ML, PEPSI-500ML · **Avoid discounting:** PRING-165G

Elasticity Distribution



Executive Pricing Segments

Highly Responsive
Best promo candidates. 10% price cut drives ~18% volume uplift.
COKE-500ML

Responsive
Good promo ROI. Monitor margin erosion per activation.
PEPSI-500ML

Moderately Responsive
Limited incremental volume from discounting.
OREO-154G · LAYS-200G

Low Responsive
Avoid promotions. Consider 5–8% list price increase.
PRING-165G

📈 REVENUE OPPORTUNITY

Oreo: Priority Investment Target

Oreo accounts for 24.2% of total portfolio revenue at £24.6K. The top promotional SKU delivers +23.3% revenue lift driven by consistent volume response. Prioritise both in the next commercial planning cycle.

🎯 PROMOTION EFFECTIVENESS

Promotions Drive Volume, Not Revenue — A Critical Strategic Distinction

Across the portfolio, promotional periods generate a +14.1% volume uplift but only +13.9% revenue lift per occurrence, indicating price reductions transfer margin to consumers rather than growing the revenue pool. The most efficient promotional ROI lies in targeted mechanics (bundle, multipacks) rather than straight price cuts.

💡 PRICE SENSITIVITY

COKE-500ML Carries Highest Price Risk in the Portfolio

COKE-500ML exhibits a price elasticity of -1.8, meaning a 10% price increase risks approximately 18% volume erosion. Conversely, PRING-165G (elasticity -0.3) shows minimal price sensitivity — a 5–8% price increase could improve margin with negligible volume impact.

⚠️ COMMERCIAL RISK

Category Concentration and Seasonality Create Portfolio Exposure

Beverages represent 40.8% of total portfolio revenue with a pronounced July–August demand peak. This concentration creates downside risk from competitor activity or supply disruption.

Balancing promotional investment toward Snacks/Biscuits in H1 would build a more resilient revenue base.

🚀 MANAGEMENT ACTIONS

Three Priority Actions for the Next Commercial Review

(1) Expand top promotional SKU frequency in Q1 2026 — data confirms strong revenue lift. (2) Eliminate price promotions on low-elasticity SKUs (discounting sacrifices margin without proportionate volume return). (3) Conduct a price corridor review for COKE-500ML ahead of H2 — consider bundle mechanics as a volume-neutral alternative to straight price reductions.
